

Declaration of Authorship at Faculty 10 (October 2025 version)

To be enclosed with all seminar papers, essays, written versions of presentations, scientific reports and final theses

I hereby declare that I have completed this paper entitled
Final Assignment on "Einführung in die nicht-klassischen Logiken"

submitted as part of the course entitled¹
Einführung in die nicht-klassischen Logiken

independently and without any unauthorized assistance from others, and that I have not used any resources or sources other than those indicated in the paper. All content taken directly or indirectly from other sources (including text passages, ideas, arguments, translations, data, illustrations etc.) is identified as such and fully documented.

This applies also to the use of AI systems and large language models (e.g., ChatGPT, Gemini, etc.): If I have taken textual passages, interpretative ideas, formulations, suggestions on argumentation or other content from an AI system, I have indicated this by referring to the source using quotation marks or other complete documentation. The scope and form of any use of AI tools in this paper are therefore transparently documented.

I am also aware that I may not present any rewordings, paraphrases, or translations of AI-generated texts or texts from others as my own ideas and considerations without disclosing the source.

I also attest that this paper does not tacitly include any passages or considerations that I have previously used in other university papers or academic papers.

I am aware that a violation of these principles constitutes plagiarism or an attempt at deception, and may result in appropriate consequences in accordance with the relevant examination and study regulations, up to and including de-enrollment from the study programme on the grounds of attempted deception.
